

Test 1: AngularJS - non server experienced candidate

- Use the public api <http://northwind.servicestack.net/customers> to get the customers
- Use the public api <http://northwind.servicestack.net/customers/> + customer.Id + '/orders' to get the specific customer orders
- Create ui using bootstrap, angular js, html5 and jquery as shown below
- Customer list and Customer details should be two different components/directives and they shouldn't be parent child

Customer Details

Customers List (91)

Maria Anders
Ana Trujillo
Antonio Moreno
Thomas Hardy

Hanna Moos
Frédérique Citeaux
Martin Sommer
Laurence Leblan
Elizabeth Lincoln
Victoria Ashworth

Customer Detail

Id:

ANATR

ContactName:

Ana Trujillo

CompanyName:

Ana Trujillo Emparedados y helados

City:

México D.F.

PostalCode:

05021

Country:

Mexico

Customer orders

1	10308		69	28.8	
2	10625		14	23.25	
3	10759		32	32	
4	10926		11	21	

Validations:

1. ID field is mandatory to be filled in to change the selected customer on left side customer list, like image below
2. Postal Code should also be editable and only allow numbers and maximum length is 6.
3. Contact Name is also editable and should allow only alphabets and characters like ' (for ex: D'Souza)
4. If any of the validation fails use angular form validation to show errors on form itself and navigation on customer list is not allowed.
